

Sweeper/Brush Mower

The new MowMaster Sweeper/Brush mower can be used both as a Maintenance or a Renovation Machine on Turf and Synthetic Surfaces.

Primarily designed for turf, it allows the operator to easily adjust the height of cut so that the desired amount of thatch or debris before and after renovation can be removed from the surface with accurate ease.

The wire brush cutting unit provides great thinning of the plant and has extremely low impact on recovery. Initial trials on this product were taken on many different types of sport turf surfaces.

The result works the same with the nylon bristle for the application on synthetic surfaces whilst also catching both unwanted debris and any to be kept sand filling.

The cutting units themselves have a long life with nil maintenance and will collect 100% of your clip.
